

Single Window to Your SWIFT Connectivity

AXLETREE SOLUTIONS, a SWIFT Solutions Partner, SWIFT Service Bureau & Service Partner SAS 70 Type II and SWIFT Audit Accreditations

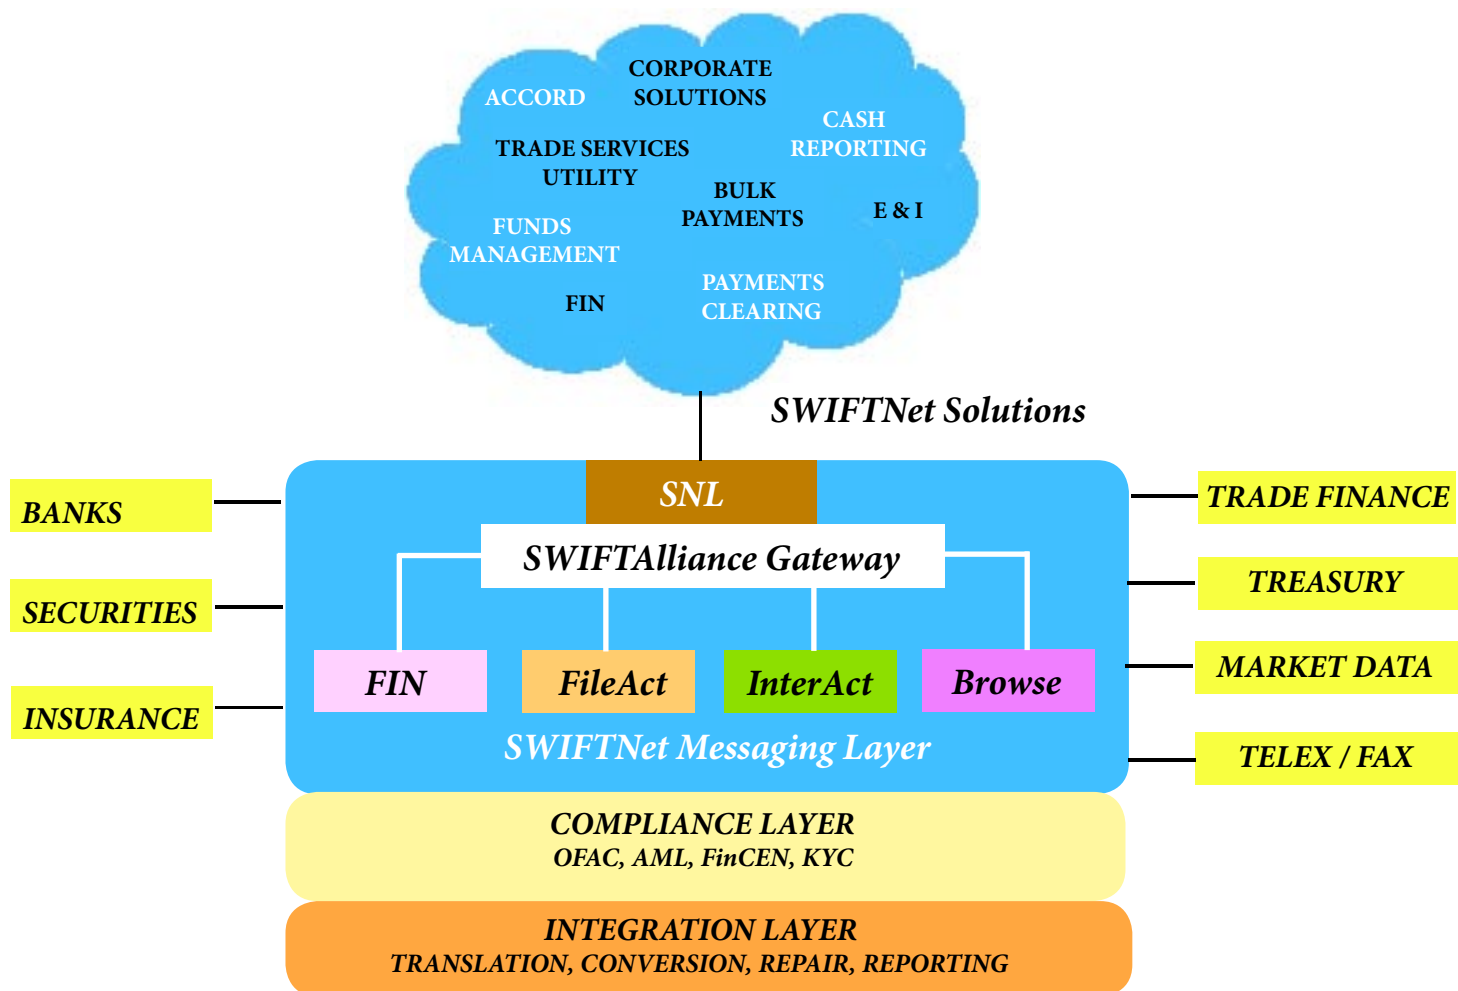

Using AXLETREE'S SWIFT Service Bureau you can outsource your day to day connectivity operations to the SWIFT Network. We offer a wide range of value added processing applications and messaging services while managing the connectivity to the SWIFTNet and the SWIFT interface on behalf of the SWIFT user.

Axletree acts as a gateway between the institutions and the SWIFT network to provide the required connectivity service. We also insulate the client from external changes, reduce complexity and cost for connecting to the SWIFTNet while you still retain total independence and control with your own SWIFT address.

We address the needs of business functions across Banks, Insurance Companies, Market Data Providers, Securities, Corporate Treasury and Trade Finance Supply chains providing them access to all SWIFTNet solutions.

AXLETREE SOLUTIONS is a SWIFT registered Service Bureau and accredited Service Partner, providing SWIFTNet connectivity solutions and value added services for Financial, Non-Financial and Corporate Clients.

As seen below, we offer a SWIFTNet access solution that significantly simplifies the process and reduces the cost of SWIFTNet services.

Value added services include an exhaustive Compliance suite comprising of OFAC, AML, FinCEN and KYC from leading partners.

AXLETREE offers seamless integration with multiple Backoffice business processing applications through leading Enterprise Application Integration (EAI) software complemented by industry standard communication protocols. The EAI software provides enhanced Message Repair and Straight Through Processing (STP) capabilities ensuring higher throughput, lower costs & achieve architectural simplicity.

AXLETREE's operations are located in North Brunswick, New Jersey with complete redundancy of hardware and networks ensuring the availability of services 24 hours a day, year round, backed up by a secure, fully redundant hot disaster recovery facility.
